

Linux cheatsheet

```
pwd # print working dir
cd # go to home dir
cd [path] # change dir (remember path)
ls # list dir content
man [cmd] # get info about command
[cmd] --help # view the help for command
```

WHERE & WHAT

```
rm [name] # remove file
rm -r [name] # remove dir
cp [name] # copy a file/dir
mv [name] [path] # move file/dir
mkdir [name] # make dir
touch [name] # create file
```

FILE/DIR BASICS

```
* # select everything
/ # forward slash paths
\ # escape character (don't use for now)
.. # one dir up/back
. # current dir
- # denotes a flag/argument
```

SPECIAL CHARACTERS

```
ls -lh * # all sizes
ls -lh [name] # file/dir size
du -hA # disk space
chmod +rwx [name] # add permission
chmod -rwx [name] # remove permission
chmod ugo+rwx [name] # specify who, add permission
```

SIZE & PERMISSION

```
less [file] # view file content
cat [file] # view file content (full)
head / tail -n 10 [file] # view n first/last lines
nano [file] # https://www.nano-editor.org/dist/latest/cheatsheet.html
vim [file] # https://vim.rtorr.com/
```

View Files

```
tar -[f] [file] # .tar files
gzip -[f] [file] # decompress (.tar).gz files
unzip -[f] [file] # decompress .zip files
zless -[f][file] # view .gz file w/o decompression

others: zcat, zmore, gzcata
```

Compressed Files

```
wc -[f][file] # Count lines, characters, bits
sort -[f][file] # Sort file (by field/column)
uniq -[f][file] # Return unique values
cut -[f][file]: # Extract field/column
paste -[f][files]: # Merge file lines
```

```
sed -[f]'command'[file] # Insertion, deletion, ...
grep -[f]['pattern'][file] # Search for pattern
awk '{pattern}'[file] # Search, replace, extract, ...
find -[f][path]['pattern'] # Search pattern in file name
```

Manipulating Files

```
wget link/[file] # Download files from the web
ssh [server] # Securely connect to a remote server
scp [file] [server] # Securely copy files between hosts
curl [link] # Transfer data to or from a server
```

Network Commands
